

# Inside out Upside down

Inside out upside down project is a house that displays the unseen things, which are the structure of the house and the environment under the Sean Saeb canal. The flip out structure is to show and learn about the architecture elements and flip down 90 degrees to show the soil and water under the canal. In addition, people on top can see people below and people below can see people above by looking through the mirror attached to the ramp to emphasize the unseen. In conclusion, this house aims to show the unseen things in the Saen Saeb canal area and learn about these things that have been overlooked.
