

# *Green Weave*

Natasha Vorapunpisut

A multi-level urban walkway integrated with motorbike highway designed to reduce air pollution and improve quality of life in Bangkok. By separating motorbike and pedestrian paths, adding greenery, and integrating a carbon capture system, the project transforms underused space into a safe, green, and functional corridor. It weaves through the city to connect people, nature, and movement more sustainably.

### *Asok Montri Rd.*

A key traffic artery in Bangkok, known for severe congestion and high pollution levels.

Its central location, heavy motorbike use, and connection to major transit hubs make it an ideal site to test sustainable mobility solutions like the elevated motorbike highway, helping reduce carbon emissions and improve pedestrian experience.
