## FORM EXPERIMENT MODEL STUDY

The organic shape is the best form to reflects the hydro related design, including bubbles, water drip and melting. Most of the shape are refer to the liquidity. This experiment aims to explore the shape from the interior via the mixed of those shapes. Seeking for positive and negative space that can be adapt into hands-on uses.

Method  
Pouring hot paraffin wax onto ice, the temperature difference is extreme. The wax instantly cools and solidifies on contact with the ice, often forming thin sheets or irregular blobs before the wax then hardens.

## ACTIVITIES HYDROTHERAPY

- Cold Water therapy  
Controlled exposure to cold water for short periods.

Used for: Reducing inflammation, boosting circulation, mental resilience.

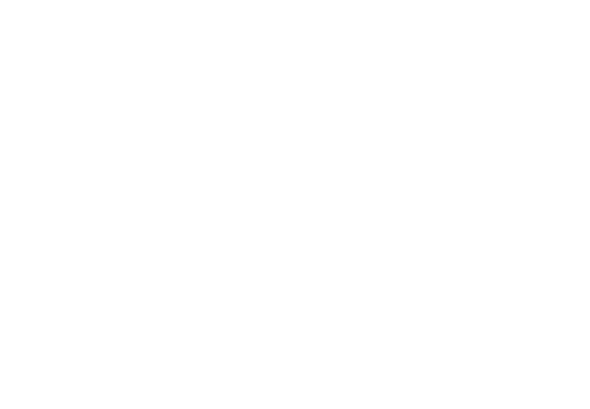

Benefits: Mood elevation (endorphin release), Improved recovery, Mental clarity & stress reduction.

- Float Therapy (Sensory Deprivation tanks)  
Floating in a dark, soundproof tank tilted with highly salted water (Epsom salts).

Used for: Anxiety, stress, pain, insomnia.

Benefits: Deep mental relaxation, Reduced sensory overload, Enhanced creativity & emotional clarity.

- Water (Water Shear)  
A gentle form of bodywork done in warm water, combining massage, joint mobilization, and stretching.

Used for: Stress, trauma recovery, PTSD, anxiety.

Benefits: Deep relaxation, Emotional release, Sense of safety and floating support.

## CIRCULATION EXPLODED AXONOMETRIC
