

Unfortunate Seanseab

An immersive space that also serves as a physical record of trash problems in Sean-Seab canal that people (tourists or even the locals) are throwing trash into the canal. after searching from Phanfa Pier to Hua Chang Pier. Transform into an immersive function for visitors to raise awareness about the "unfortunate" problems that the community must confront. Unfortunate Seanseab contains the tube structure to pull the trash in the canal into space, visitors can come to see what people are doing to the canal and how the trash affects the community's environment such as smell, vision and sound.

And a structure that transforms as a walkway that brings you to see the design from a different point of view like top, side front and underneath. This project is trying to make the visitors' experience feel uncomfortable from the dirty of trash and water, to make every visitor reflect what we are doing right now, what do communities confront and how can we resolve this problem or build a new good environment for many communities along the sean seab canal.
